

Appendix: Adoption and continued use of mobile contact tracing technology

Figure A1: Missing data patterns across attitudinal predictors + adoption (DV, wave 2)

Notes: attitudinal predictors more likely to be missing for non-adopters, particularly “ease of use”; some but not all attitudes are related to each other in terms of missingness, for example those with missing data on ease of use were more concerned about privacy.

Table A1: Logistic regression results pooled across five multiply imputed*** datasets

Model	Term	Log odds	OR	SE	p	RIV*	Lambda**
Initial adoption N = 2,500 N (districts) = 1,282 SD (districts) = 0.34 m = 5*** AIC = 2596.07 BIC = 2712.55 logLik = -1278.03 df.resid = 2,480	Intercept	-0.82	0.44	0.23	0.00	0.02	0.02
