

Table of odds ratios for the comparison of patient-texted versus automatic-transmission from a generalised estimating equations model fitted to the repeated measures outcome data, after restricting the sample to those patients with median systolic BP above 120 and median diastolic BP above 80

Outcome	Automatic transmission	Patient texted	OR	95% CI of OR	Robust Z-scores
Double zero	0.9% (142/15808)	1.7% (361/21054)	1.93	1.57 to 2.37	6.24
Systolic end digit of zero	9.7% (1539/15808)	10.8% (2264/21054)	1.11	1.04 to 1.20	2.94
Diastolic end digit of zero	9.4% (1489/15808)	10.1% (2120/21054)	1.09	1.01 to 1.17	2.25
